

Horizon and Ellipse Awnings

A retractable awning is the perfect way to extend your living space outdoors. If you want a reliable shade system, the **Horizon Monobloc** and the **Ellipse Monobloc** are two excellent choices. Your decision will depend entirely on your space, your budget, and local wind conditions.

The **Horizon Monobloc** is a premium, heavy-duty awning designed for large spaces and harsh weather. Built with high-grade aluminium and marine-grade stainless steel, it is strong enough to handle coastal winds. This model can span massive widths up to 14 metres with a 4-metre projection, making it ideal for large entertainment decks or commercial spaces.

The **Ellipse Monobloc** is a streamlined, highly cost-effective solution perfect for classic residential decks. It handles widths up to 6 metres and features a classic, lightweight folding-arm design. A key benefit of the Ellipse is its adjustable pitch, which lets you manually tilt the awning to block the sun as it moves lower in the sky.

Choose the Horizon if you need maximum wind resistance and large coverage, or pick the Ellipse for a smart, beautifully balanced solution for a standard backyard patio.
